T O T H E T R A D E

I N this catalog will be found many new and worthy ideas in design and construction. The fixtures illustrated and described in these pages represent the best skill of the potter's art in sanitary ware. The merit of our Vitreous China Lavatories, Closets and other Sanitary Earthenware Products lies in the correctness of design from the standpoint of the sanitary engineer, in the strength and solidity of their construction, in the grace of their outlines and in the highly perfected methods and process of their manufacture. We stand back of our product with every reasonable guarantee; they are unexcelled by any manufactured and their reputation assures for them a life time of service.

A WORD ABOUT VITREOUS CHINA

Vitreous China or Vitrified Earthenware is not a new product of the potter's art. It has been produced for many years in this country and abroad and applied in the manufacture of the most beautiful and substantial art and tablewares known to the *Ceramic Art*. Only in recent years, however, has it been successfully demonstrated that the larger pieces required in sanitary wares could be manufactured in a body so very close and impervious to absorption of moisture so as to admit of its being marketed with a degree of economy to put these beautiful goods in the hands of the exacting and critical purchaser.

The American Potter was the first to demonstrate his ability to accomplish this desired result, and the Great Western Pottery Company was among the first to bring out a line of these highly scientific and sanitary fixtures of approved design and substantial superiority, and we have kept abreast with the improvements in this art until today we manufacture a line that is second to none in beauty of design and durability of service.

The Great Western Pottery Company

Kokomo, Indiana ☞ Tiffin, Ohio

This Catalog is Compiled in Seven Sections as Follows:

- Section A — Illustrating and describing Lavatories, Etc.
- Section B — Illustrating and describing Water Closets.
- Section C — Illustrating and describing Tanks and Combinations.
- Section D — Illustrating and describing Government Ware.
- Section E — Illustrating and describing Jetector and Wall Closets.
- Section F — Illustrating and describing Urinals and Basins.
- Section G — Illustrating and describing Nickel-plated and Rough
Brass Work.

COMPILER'S NOTE

In compiling this catalog, which is issued with a view to permanency, a departure from custom has been made in using Stock Numbers in place of Plate Numbers to indicate the fixtures. These Stock Numbers, while serving the same purpose as Plate Numbers, are devised to carry with themselves an identification of the fixture, being the same as is indented in the Ware in the process of manufacture, and we believe that a little familiarity will demonstrate their utility and that the innovation will be welcomed by the Trade.

VITREOUS CHINA **DEVORO** NOISELESS SYPHON JET CLOSET BOWL WITH
Integro RAISED REAR VENT
 (Patent Applied For)

List, Closet with Vent only.....	Prices on Application	
Stock Numbers.....	1½-inch Supply	2-inch Supply
	423 A	423 C

This Closet embraces all the features of **DEVORO** Closet and in addition has the *Integro* Vent integral with the Closet.

Closet is shown with 3¼-inch *Integro* Vent which has an effective area of 8.25 square inches.

Also made with 2½-inch *Integro* Vent which has an effective area of 4.90 square inches.

423 C

SECTIONAL VIEW OF **DEVORO** NOISELESS CLOSET BOWL WITH
Integro VENT

Our **DEVORO** Bowl, while following the lines of the Syphon Jet and employing the jet in operation has a new principle of operation, in common with the **EXPULSO** Bowl, consisting of an enlarged down-leg, which feature makes possible some remarkable results, the most gratifying being that of really noiseless operation—a feature long sought for but never realized in other than the **DEVORO** Bowl.

So quiet is the operation of the **DEVORO** that "soundless" best describes it, while at the same time a very deep seal, full $3\frac{5}{8}$ inches, with a water area of 10 x 12 inches, is made possible by the new principles described, with instantaneous discharge of the bowl contents to complete a perfect example of closet operation.

The waterway of the **DEVORO** Bowl is exceptionally large, passing freely a ball $2\frac{5}{8}$ inches in diameter.

Closet is shown with $3\frac{1}{4}$ -inch Vent which has an effective area of 8.25 square inches.

Also made with $2\frac{1}{2}$ -inch Vent which has an effective area of 4.90 square inches.

SECTION B

423 G

VITREOUS CHINA **DEVORO** NOISELESS SYPHON JET CLOSET BOWL FOR
WALL OUTLET WITH *Integro* RAISED REAR VENT

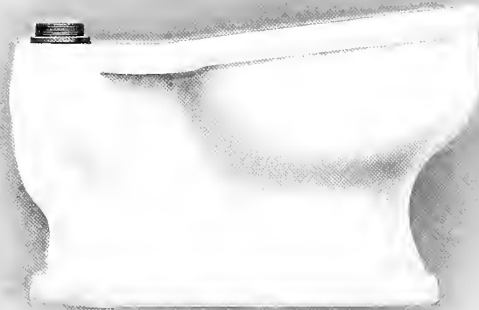

(Patent Applied For)

List, Closet only.....Prices on Application

This Closet is extra heavy and is unsurpassed for Schools and Public Institutions where a Closet embracing the features shown in this structure is required.

Closet is shown with 3¼-inch *Integro* Vent which has an effective area of 8.25 square inches.

Also made with 2½-inch *Integro* Vent which has an effective area of 4.90 square inches.

427 B

VITREOUS CHINA NATURO SYPHON JET CLOSET BOWL

This low, backward-sloping closet is finding a wide acceptance in the trade because of the sanitary and hygienic features which it embodies. It is particularly recommended for Schools and Hospitals. It is covered by a broad patent that secures to its owners the exclusive right to manufacture a closet, the front of whose bowl is higher than the back.

We are also in a position to supply Wash-down Syphon Closets of the "Naturo" type. Both Syphon Jet and Wash-down are made for either high or low tank.

For Syphon Jet (427 B) allow $4\frac{1}{2}$ inches from center of outlet to center of spud.

For Wash-down (456 B) allow $10\frac{5}{8}$ inches from center of outlet to face of spud (back supply).

Price on application.

SECTION: B

428 A

VITREOUS CHINA NO. 2 IMPROVED SQUARE BACK SYPHON JET
CLOSET BOWL

List, Closet only, plain..... \$22 00

A WORD ABOUT OUR VITREOUS CHINA TANKS AND TRIMMINGS

The following pages illustrate a considerable portion of the line of Vitreous China Tanks which we are producing at our two plants. The designs shown herein have been modeled to conform to the various ideas which we felt were necessary to meet the demands of the exacting trade which we are serving. The line comprises various sizes and styles that we think offer a satisfactory selection for the most critical. These Tanks are guaranteed to be of our highest quality Vitreous China, sufficiently heavy to withstand the hard usage which they may be subjected to, perfectly white and of ample capacity in each case for flushing the closets which they may be shown with in combination herein.

The Trimmings we have selected after most careful consideration and they are guaranteed on the higher priced Tanks to be as good as can be made or bought, and satisfactory for any and all pressures or kinds of water. On the cheaper tanks we have in no way tried to economize by inserting flimsy or unsatisfactory Trimmings. They are first class in every way, carefully constructed and assembled as to material and workmanship; this applies as well to the operating levers, valves and ball cocks as it does to other parts of the complete fixture.

SECTION C

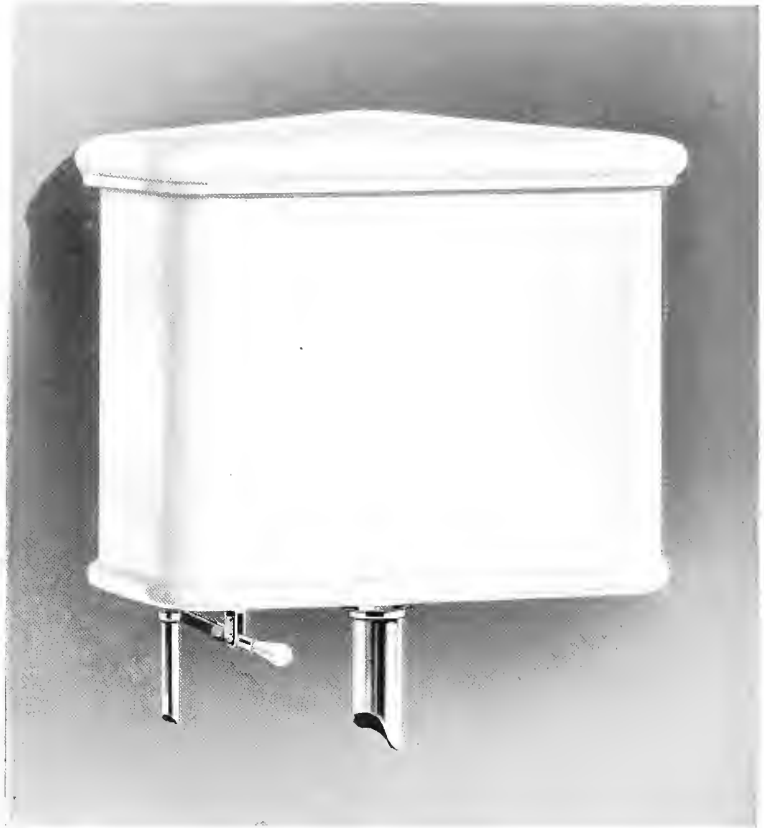

600 G — BERLIN

VITREOUS CHINA STRAIGHT FRONT LOW DOWN TANK

Fitted with Compound Lever Elevated Ball Cock and Rubber Ball Float Flush Valve, and China Handle Side Trip Lever, Flush Connection.

AVCO-PORCELAIN URINALS

In the Porcelain Urinals illustrated on the following pages we are presenting fixtures which are the very highest attainment in sanitary excellence.

The urinals being made of a special clay and glaze, perfectly fused by intense heat, present a beautiful white surface and are impervious to moisture and non-stainable.

We are illustrating such urinals as are made in ONE PIECE ONLY, eliminating the use of separate floor slabs, pilasters and caps, thus avoiding the many unsanitary joints necessary to a urinal composed of two or more parts.

AVCO-PORCELAIN URINALS

Any of the porcelain integral shield urinals illustrated can be furnished with the "AVCO" INTERLOCKING CONCEALED SEAM (as shown by the accompanying sketch) where it is desired to install same in batteries. The single seam between units being concealed, assures a sanitary and perfect construction.

The ventilating feature of the "AVCO-REGO" urinal, as shown in sectional cut, is unique and efficient. The fixture is so designed as to converge the air currents (without obstruction) to the large vent opening, which is concealed under the hooded top at the extreme height of urinal, and when used with ventilating system insures the expulsion of all obnoxious odors.

Our integral shield urinals are made with PANELED SIDES (as shown by accompanying sketch), which adds materially to their appearance. All exposed surfaces are glazed white.

Sanitarians recommend the use of the "AVCO-REGO" urinal in schools, hospitals, and other institutions where perfect ventilation is desired.

SECTION F

1050 — REGO

“AVCO-PORCELAIN” one-piece urinal with integral shields, drip receptor and dome vent “Haas Hydrometer” flush valve, concealed self-cleansing spreader and heavy brass waste connection, with 5-inch removable convex strainer. All fittings nickel-plated.

DIMENSIONS

Height above floor, 55 inches; depth below floor line, $4\frac{1}{2}$ inches; width, 24 inches; from wall to front of drip receptor, 20 inches.

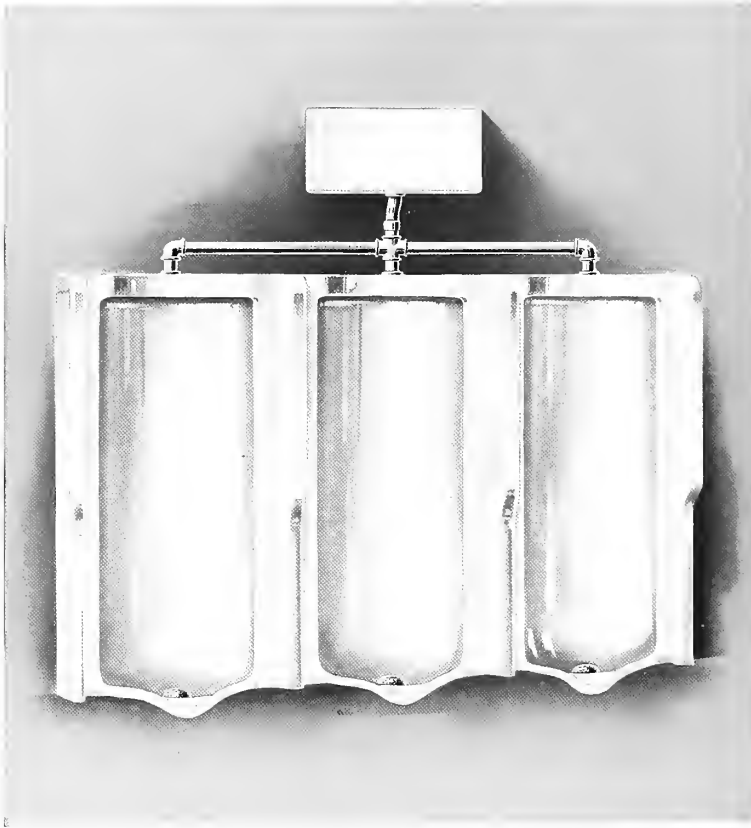

Price, complete, each stall as described..... \$70 00

Can be furnished in batteries of any number of compartments.

Can be furnished with automatic tank. Price on application.

The urinal as shown is equipped with the “Haas-Hydrometer” flushing valve, which has many advantages over the flushing tank. It is more efficient in action, economical in the use of water, and being placed close to the urinal obviates the necessity of unsightly tank and flush pipes.

The valve operates the urinal with about one-tenth the amount of water required to operate a tank, while the valve cleanses the urinal more thoroughly, as it delivers the water to the urinal at a pressure.

1051 — MORO

"AVCO-PORCELAIN" one-piece urinal, with integral shields and drip receptor, arranged in battery of three compartments, with interlocking concealed seam; equipped with china automatic tank, flush connections, self-cleansing spreaders, and heavy brass waste connection, with 5-inch removable "convex" strainer. All fittings nickel-plated.

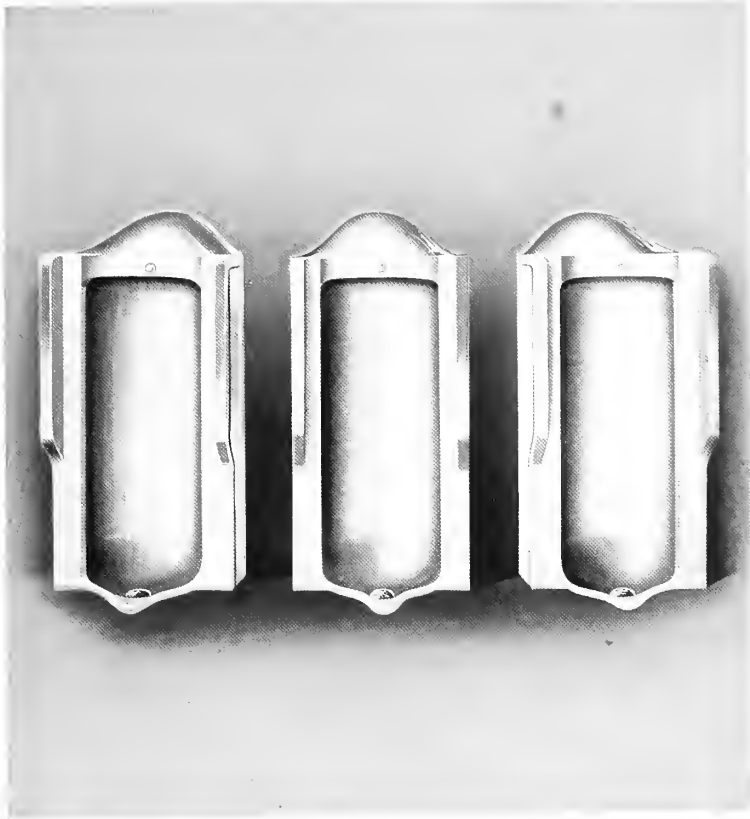

DIMENSIONS

Height above floor, 44 inches; depth below floor line, $4\frac{1}{2}$ inches; width, each compartment, 24 inches; from floor to front of drip receptor, 19 inches.

Price, set of three as described	\$165 00
Price, set of three with "Haas Hydrometer" valve.....	195 00

Can be furnished in batteries of any number of compartments.

SECTION · F

1052 — INDO

“AVCO-PORCELAIN” one-piece urinal, with integral shields, drip receptor and dome top, arranged in battery of three compartments; equipped with “Haas-Hydrometer” flush valves, nickel-plated concealed self-cleansing spreader and heavy brass waste connection, with 5-inch removable convex strainer.

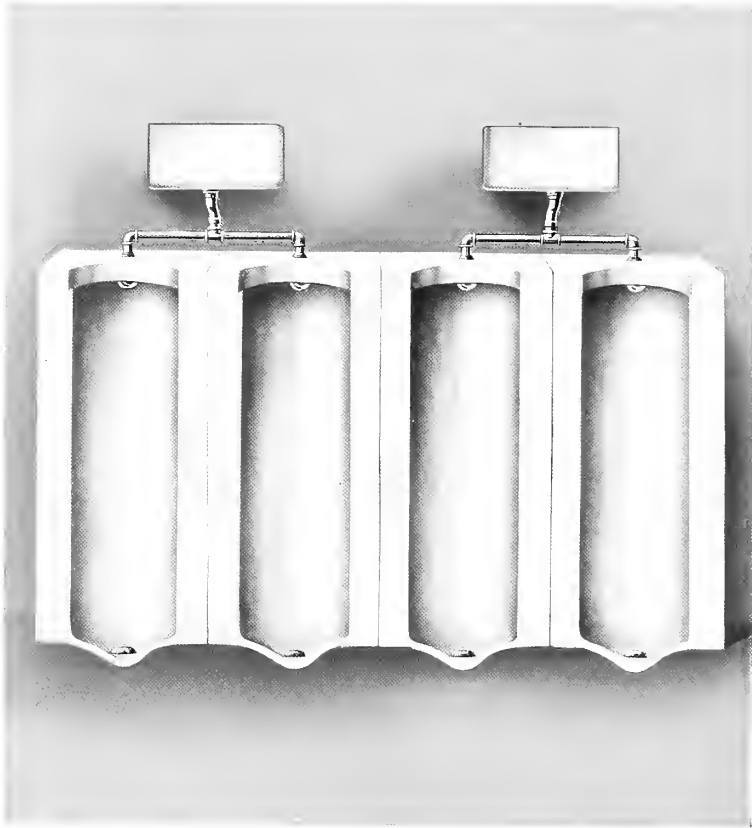

DIMENSIONS

Height above floor, 55 inches; depth below floor line, $4\frac{1}{2}$ inches; width each compartment, 24 inches; from wall to front of drip receptor, 20 inches.

Price each compartment, as described..... \$80 00

An admirable feature of the above urinal is the dome top, which greatly enhances appearance, admits of entire flushing arrangement being concealed, and placing the indexed push button in a most convenient position.

SECTION F

1053 — NOVO

"AVCO-PORCELAIN" one-piece urinal, arranged in battery of four compartments; equipped with china automatic tank for each two compartments, flush connections, self-cleansing spreaders, and heavy brass waste connection, with 5-inch removable convex strainer. All fittings nickel-plated.

DIMENSIONS

Height above floor, 44 inches; depth below floor $4\frac{1}{2}$ inches; from wall to front of drip receptor, 19 inches.

Price, set of four 18 inches wide as shown.....	\$170 00
Price, set of four 24 inches wide as shown.....	190 00

ADJUSTO CLOSET FLOOR FLANGE

ADJUSTO CLOSET FLOOR FLANGE

This flange is a metal to metal connection, is perfectly water tight and sanitary.

A ring of brass is permanently secured to an earthenware flange on the outside of the closet outlet by means of a screw thread and metallic cement. This ring has two machined parts, a guide and a seat. The seat, which is the beveled part, effects the seal when brought into contact with a like beveled surface on the top of the adjustable ring, while the guide leads the beveled part of the adjustable ring to a true and accurate contact with the beveled surface on the permanently set ring. The flange is interchangeable and adjustable and any closet can be made special to fit this flange.

Prices on Application.
